

ABSTRACT

- A method for directing a packet to a required bearer of a set of bearers. The method comprising the steps of:
- 5 (a) receiving the packet;
 - (b) checking if the packet is a fragmented packet and if it is,
 - 10 (c) checking if the packet comprises information related to selection of the correct bearer and if it does,
 - forwarding the packet to the correct bearer
 - storing fragmentation related information contained in the packet
 - receiving second packet
 - 15 forwarding said second packet to the correct bearer based on the fragmentation related information.
 - and if it does not,
 - storing fragmentation related information contained in the packet
 - 20 storing said packet;
 - receiving another packet containing information related to the selection of the correct bearer
 - 25 forwarding another packet and the stored packet(s) to the correct bearer.
